

A diagram of a shower stall. It features a curved glass door on the right side, which is hinged at the top and bottom. To the left of the door is a fixed glass panel. The shower is set within a tiled enclosure with a tiled floor and walls. The door and panel are shown in a perspective view, with the door slightly ajar.

This exploded view diagram illustrates the components of a door assembly. The parts are numbered as follows:

- 1**: Vertical trim piece on the left side.
- 2**: The main door panel.
- 3**: The door frame or threshold.
- 4**: Small rectangular components, possibly for the lock or handle.
- 5**: A cylindrical component, likely a lock cylinder or handle base.
- 6**: Vertical trim piece on the right side.
- 7**: A long, thin vertical component, possibly a hinge or support.
- 8**: A small rectangular component, possibly a hinge or support.
- 9**: A curved component, possibly a hinge or support.
- 10**: A curved component, possibly a hinge or support.
- 11**: A small rectangular component, possibly a hinge or support.
- 12**: A small rectangular component, possibly a hinge or support.
- 13**: A small rectangular component, possibly a hinge or support.
- 14**: A curved component, possibly a hinge or support.
- 98**: A small rectangular component, possibly a hinge or support.

The diagram shows the relative positions and assembly sequence of these parts. A label "Ident" with an arrow points to part 1. A dashed box encloses parts 4, 5, 11, and 12, indicating they are related components. A curved line connects parts 9 and 10, suggesting they are part of the same assembly.
